SMARTBRIDGE
Let's Bridge the Gap

Project Initialization and Planning Phase

Date	24 October 2026
Team ID	
Project Title	Global Olympic Sports Performance Analysis
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	To build an interactive, data-driven web portal that visualizes 120+ years of Olympic history, allowing users to analyze performance trends by country, sport, and year.
Scope	The project covers data processing of historical Olympic datasets, development of 8 Tableau visualizations, creation of an interactive Story, and embedding these assets into a responsive Flask web application.
Problem Statement	
Description	Sports analysts and Olympic committees struggle to extract meaningful insights from massive, fragmented historical datasets stored in static CSV files.
Impact	Decision-makers lack the historical context needed to evaluate athlete efficiency, measure the ROI of sports investments, or identify rising global competitors.
Proposed Solution	
Approach	We will utilize Tableau Desktop to clean and relate the flat files, compute necessary KPIs, and generate interactive dashboards. These will be published to Tableau Public and wrapped in a Python Flask backend with a Bootstrap HTML/CSS frontend.
Key Features	Dynamic KPI selection, geospatial mapping of medal density, multi-scene narrative storytelling, and mobile-responsive web deployment.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard multi-core CPU (e.g., Intel i5 or AMD Ryzen 5)
Memory	RAM specifications	Minimum 8 GB RAM (16 GB recommended for Tableau)
Storage	Disk space for data, models, and logs	500 MB for raw data and local Flask files
Software		
Frameworks	Web frameworks	Python Flask
Libraries	Data processing (if needed in backend)	Pandas (Python)
Development Environment	IDE, version control	VS Code, Anaconda (base environment), Git / GitHub
Data		
Data	Source, size, format	athletes.csv, games_summary.csv (Kaggle / IOC data, approx. 10MB)
